

## Forklift Fork Positioner

Fork Positioner for Forklifts - A fork positioner is a device made out of top quality materials meant to endure the most challenging procedures and work environments. This piece of equipment can enable the person driving to work the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load so as to facilitate much more accurate lifting and position in a faster and much more effective method.

The only one of its kind blade pocket design enables the person operating it to securely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the operator the option to either perform simultaneous or independent fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on existing units.
